PIRATE FIGHTERZ

WHY THIS PROJECT

We set out to build a complete game from scratch—no templates, no asset packs — to gain a real understandingofhow games are engineered from the ground up.

A 2D fighting game was the perfect test: it required us to solve frame-by-frame animation, per-player controller routing, physics, collision, and attack balancing all at the same time.

The result is a fully playable local multiplayer game built entirely in Unity.

HOW IT WORKS

Up to 6 players compete on a shared screen using separate controllers or keyboard layouts — one input scheme per player.

Each fighter has a health bar. Deplete your opponent's HP to win the round. Before each match, a character select screen lets players choose their fighter from the available roster.

Combat is built on timing and reads: attack, block, and counter.

FIGHTERS & GAMEPLAY

COMBAT SYSTEM

- **Quick Attack**
  Faststrike,shortrecovery time
- **Heavy Attack**
  Slower,high-damage sword swing
- Block
  Negates all damage
- Jump
  Tomovebetween platforms
- Movement
  Canrunleftand right

TECHNOLOGY

Game engine • Physics • Scenes • Sprite rendering

C#
Allgameplay logic
Input • Animation • Health

Unity Input System
Per-player controller & keyboard routing

KEY FEATURES

- **Local 2-Player Multiplayer**
  Shared screen,separate inputper player
- **Character Select Screen**
  Both playerspicktheir fighter pre-match
- **Quick & Heavy Attacks**
  Two attacktypeswith distincttiming
- **Block Mechanic**
  Strategicdamage-reduction option
- **Health Bars & Win State**
  HPsystemwith roundwinnerlogic
- **Sprite Animation System**
  Frame-by-frame per-characteranimations
- **Controller + Keyboard Input**
  Xboxcontrollers andWASDbothsupported

All art & assets original to this project.
